Menstrual App

I caught my **wife** counting on the calendar, I decided to ask her if she was expecting some money and she mentioned that She was calculating our safe period (Dey play oh!!!).

Your task is simple, I think

1. Help me research on the female menstrual cycle.

2. Do me a small app like Uber that will enable her to calculate everything that has to do with her menstrual cycle ranging from flow date, through safe periods, Ovulation dates, etc.

3. Decide what inputs your app should receive and outputs your app will give out. All I just want is to go through your tests and understand how to use the app.

Please EPP a brother oh!!!

Submission instruction:

1. **Create a github repository called PhaseGateOne.**
2. **Create a folders in the repository for each programming languages (Javascript, Python, Java)**
3. **Commit every 2 hours to show your progress.**
4. **This task should be ready by midnight today**

PS: This snack is not a group snack, DO NOT SHARE.
